Moist to average soil, part shade, 4–5' tall. Its diminutive size, heavy flowering, and pink blooms differentiate this

Ilex verticillata ‘Winter Gold’ Winterberry
DT BD BF BE
The prolific berries of this variety are golden-orange in color. The fruit of this deciduous shrub persists after the leaves have fallen, providing stunning winter color. As with all Ilex species, the females produce fruit only if a male is growing nearby. Moist, acidic soil, sun to shade, 5–8' tall.

Physocarpus opulifolius ‘Gumdrop Lemon Candy’ Common ninebark
BD BF BE
A dwarf variety of the popular deciduous shrub—and with chartreuse leaves. The white spirea-like flowers, persistent seed pods, and exfoliating bark make this a plant for all seasons and a beneficial alternative to the non-native, golden-leaved spirea. Of special value to native bees. Dry to moist soil, sun to part shade, 3–4' tall.

Pinus strobus ‘Torulosa’ Eastern white pine

The curled needles of this variety of the classic conifer add a fluffy look and texture to the landscape. Suitable to stir up conversation—and the desire to touch the waxy foliage. Attracts birds and mammals for food and shelter. Average to moist, well-drained soil, sun to part shade, 40–50' tall.

Rhododendron periclymenoides ‘Deep Pink’ Pinknertbloom azalea
BD HB BF BE
Fragrant pink flowers emerge just before deciduous foliage in spring. OR special value to bumblebees. Average to moist, well-drained soil, part shade, 5–6' tall.

Thuja occidentalis ‘Rheingold’ Arborvitae
BD
The golden foliage of this dwarf variety of evergreen shrub provides a lovely contrast to green in the landscape and year-round interest to the garden. A good alternative to the non-native, yellow-foliaged Chamaecyparis. Average soil, sun to part shade, 3–5' tall.

Viburnum dentatum Arrowwood
BD BF BE
The flat-topped clusters of white flowers on this deciduous shrub in spring give way to dark-blue berries relished by birds. Foliage turns yellow to red in fall. Larval host to the spring azure butterfly and of special value to native bees. Dry to moist, acidic soil, sun to part shade, 6–8' tall.

Xanthorhiza simplicissima Yellowroot
BD
Delicate stems with inconspicuous purple flowers in spring are followed by star-shaped fruits eaten by birds. But this deciduous, spreading shrub is appreciated more for its foliage, which turns yellow then red and purple in fall. Used for erosion control. Average to wet soil, sun to shade, 2–3' tall.

Lonicera sempervirens Trumpet honeysuckle
BD HB BF
The clusters of red tubular flowers with yellow throats of this twining vine down-hungmingbird all summer. Blooms through frost in sunny locations. Birds and chipmunks eat the bright-red berries. Average to moist soil, sun to part shade, 6–12' tall.

Physocarpus opulifolius ‘Tinkerbell’ Mountain laurel

**Pachysandra procumbens**  
**Allegheny spurge**  
DR BF  
Fragrant white flower clusters rise above toothed, mottled leaves. This attractive semi-evergreen in mild winters spreads slowly with long rhizomes and has a more mound-forming than the ubiquitous non-native pachysandra. Moist, rich soil, part to full shade, 10" tall.

**Phlox stolonifera**  
**Creeping phlox**  
DR DT BF  
Masses of purple flowers arise from mat-forming foliage to create a showy carpet in spring. Easy to interplant with other perennials. A must for shade gardens. Average to moist soil, part shade, 8" tall.

**Phlox subulata 'Purple Beauty'**  
**Moss phlox**  
DR DT BF BE  
This rock garden favorite is a colorful carpet of purple flowers that draw butterflies in May. The moss-like mat creates year-round interest. Lovely over a stone wall or as a groundcover. Early nectar source for butterflies and bees. Average soil, sun to part shade, 4-6" tall.

**Polemonium reptans 'Touch of Class'**  
**Jacob’s ladder**  
DR HB BF BE  
The variegated white-and-green leaves of this cultivar brighten the shady garden even before the blue-violaceous flowers appear in May. Of special value to native bees. Average soil, part to full shade, 6-10" tall.

**Sedum ternatum**  
**Larinem park’**  
**Virginia mountain mint**  
DR DT  
Aromatic aster  
Sedum ternatum var ‘autinem park’  
This shade-loving sedum is smothered with delicate white flowers in spring. Its slow-creeping habit makes it useful in the rock garden.

**Silene caroliniana**  
**Wild pink**  
DR BF  
Clusters of rose-pink flowers cover low-mounding foliage in spring. A rock garden favorite that can also grace well-drained garden beds. Ex- ploitably vulnerable in NY. Average soil, sun to part shade, 8-12" tall.

**Spigelia marilandica**  
**Indian pink**  
DR HB DT  
The red tubular flowers with striking yellow throats of this woodland species attract hummingbirds. Slow to emerge in spring, but long bloom time. Average to moist soil, part shade, 12-15" tall.

**Tiarella cordifolia**  
**Foamflower**  
DR BF  
Spikes of creamy white flowers above semi-evergreen leaves carpet the woodland in spring. Cpreys by runners, but is not aggressive and mixes well with other woodland plants. Endangered in NJ. Moist soil, part to full shade, 8-12" tall.

**Uvaria grandiflora**  
**Merrybells**  
DT BE  

**Viola walteri 'Silver Gem'**  
**Prostrate blue violet**  
DR DT BF  
Striking silver-tinted, heart-shaped foliage with contrasting green veins form a tidy clump that spreads slowly. Delicate violet-blue flowers appear in March and persist through fall. Moist to dry soil, part to full shade, 3-5" tall.

**Asclepias incarnata 'Ice Ballet'**  
**Swamp milkweed**  
DR BF BE  
A lovely milkweed with magenta flowers is rarely found in nurseries. A lavish host for monarch butterflies and of special value to native bees. Of Special Concern in CT. Dry soil, sun, 2’ tall.

**Asclepias purpurascens**  
**Purple milkweed**  
DR DT BD BF BE  
The vivid orange, red, yellow, and purple flowers of this multi-colored cultivar enlivens the sunny border from summer into fall. Strong, bushy branching holds up in wind and rain. Seed heads provide winter interest and food for wildlife. Average to dry soil, sun, 18–30” tall.

**Filipendula rubra**  
**Queen of the prairie**  
DR BF  
Fragrant pink, astilbe-like panicles bloom in midsummer above deeply cut compound leaves. A large plant for meadow or back of the border. Endangered in NJ. Average to wet soil, sun to part shade, 5-8” tall.

**Helianthemum arvense 'Fuego'**  
**Sneezeweed**  
DR BE  
This compact variety is covered in cheery orange-and-gold daisy-like flowers from July until frost. Attracts butterflies and is of special value to native bees. Average to moist soil, sun, 18-24” tall.

**Heliopsis helianthoides var. scabra 'Sunburst'**  
**Oxeye sunflower**  
DR BF  
The variegated white-and-green leaves of this cultivar brighten the middle to back of the perennial border. As the season progresses, the leaves green up and the focus moves to the show-stopping yellow blossoms July–August. Average to dry soil, sun to part shade, 30–36” tall.

**Heuchera villosa 'Autumn Bride'**  
**Alumroot**  
DR DT  
Above the velvety, lime-green basal leaves of this cultivar burst large clouds of white flowers on two-foot stalks. Plant in masses for a showy fall border or woodland edge. Moist, well-drained soil, part to full shade, 1-2’ tall.

**Lobelia cardinalis 'New Moon Maroon'**  
**Cardinal flower**  
DR WL HB BF  
Brilliant-red tubular flowers in late July–August are a hummingbird favorite. On this variety, the flowers spike from red-purple foliage that intensifies with increased sunlight. Moist soil, sun to part shade, 2-4’ tall.

**Monarda didyma**  
**Beebalm**  
DR BD HB BF BE  
Clusters of bright-red flowers from midsummer to fall attract hummingbirds and butterflies. Rarely found in nurseries, this member of the mint family has fragrant leaves and will spread, but not aggressively. Deadhead flowers for longer bloom time. Of special value to native bees. Average soil, sun, 2-4’ tall.

**Pycnanthemum virginianum**  
**Virginia mountain mint**  
DR BF BE  
clusters of tiny white flowers often with purple spots emerge July to September, hosting masses of pollinators. Spreads when happy, but is less aggressive when grown in drier soils. Of special value to native bees. Average to moist soil, sun, 2-3’ tall.

**Sabatia angularis**  
**Rose pink**  
Dr DT BF  
Star-like flowers are pink with a yellow center and appear at the end of erect stems in mid- to late summer. A lovely, delicate addition to the woodland border. Endangered in NY. Moist soil, part shade, 18-24” tall.

**Solidago speciosa**  
**Showy goldenrod**  
DR BD BF BE  
Among the most eye-catching of native goldenrods. Bright-yellow flowers grow in erect clusters on red-tinted stalks in August and September, providing a late-season source of nectar for pollinators. Average to moist, well-drained soil, part shade, 2-3’ tall.

**Symphyotrichum oblongifolium**  
**'October Skies'**  
**Aster oblongifolius**  
**Aromatic aster**  
DR DT BE  
A bushy mound of delicate green is ablaze in fall with masses of small daisy-like flowers of deep blue, notable to this cultivar. The low-mounded habit creates a lovely front-of-the-border hedge. Tolerates poor soils. Of special value to native bees. Average to dry soil, sun, 18” tall.

**Veronicastrum virginicum 'Fascination'**  
**Culver's root**  
DR TD BF BE  
Dramatic spikes of this cultivar's pale-lavender flowers appear above fern-like foliage in July and August. Attractive in the back of the border; tough and long-lasting once established. Moist to average soil, sun to part shade, 4-5’ tall.

**Carex appalaccica**  
**Appalachian sedge**  
DR DT  
Compact, mounded clumps of fine blades. Use as edging plant, groundcover, or lawn substitute for low-traffic areas. Lovely in a container or window box. Average to dry soil, part to full shade, 3-5’ tall.

**Sorghastrum nutans**  
**Indiangrass**  
DR DT BD  
Blush-green foliage during summer turns deep-gold in fall. Panicles of copper-colored seed heads add to the spectacular show that lasts much of winter. Exceptionally drought resistant and also salt tolerant. Average to dry soil, sun, 3-4’ tall.

**Adiantum pedatum**  
**Maidenhair fern**  
DR DT  
A delicate spiral of fronds on black, wiry stems make this fern distinctive. A slow spreader that is drought tolerant once established. Established in Maine, average soil, shade, 12–15” tall.

**Athyrium filix-femina 'Victoriae'**  
**Lady fern**  
DR DT  
The interesting architecture of this cultivar's frond—its leaflets criss- cross to form x's—adds a unique feature to the shade garden. Fine and delicate in appearance yet hardy and tolerant of dry and poor soils. Moist soil, part to full shade, 18-24” tall.

**Calycanthus floridus**  
**Carolina allspice**  
DR  
Maroon, tulip-like flowers adorn this dense, rounded deciduous shrub in May and June. Blooms have a fruity strawberry-banana-pineapple scent. Fall is met with bright-yellow foliage and brown seed pods that rattle. Will sucker when happy. Beetle polluted. Average soil, sun to part shade, 6-10’ tall.

**Clethra alnifolia**  
**Hummingbird**  
**Sweet pepperbush**  
BF BE  
A compact, more rounded version of the slow-spreading pollinator magnet. Bottlebrush-like spikes of fragrant white flowers in summer and yellow fall foliage. Good for the rain garden and small spaces. Average to moist soil, sun to part shade, 2-4’ tall.

**Gaultheria procumbens**  
**Wintergreen**  
DR BD  
A stunning, low woody evergreen that spreads slowly. Petite, bell-shaped, white to pale-pink flowers in spring. Shiny dark-green aromatic leaves turn burgundy in fall. Showy red fruits persist through winter. Moist, acidic soil, part shade, 6” tall, 3’ wide.
